

Neem Pro 100%

Organic Insecticide

Neem Pro 100% comes from the seeds of the neem tree and contains powerful natural insecticides. **Neem Pro** brand oils come from seeds selected for their high Azadarachtin content, then cold-pressed to preserve those active ingredients.

A foliar spray of **Neem Pro 100%** will protect your plants from any bugs which eat or suck the plant tissue. It is strong enough for commercial agriculture (with 3750 ppm Azadarachtin), yet safe enough to spray indoors!

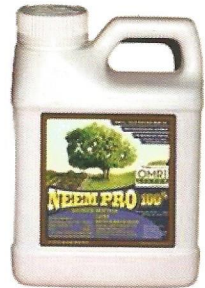

www.neempro.com 

Effective against:

- Spider Mites and all members of the mite family (chiggers & ticks),
- Aphids, whiteflies, moths, leaf miners,
- Borers, beetles, black spot, mealybugs,
- Scale, fungi, mildews...

Neem Pro 100% is powerful enough to kill an infestation, and goes on repelling pests for two weeks. Many active compounds makes it nearly impossible for pests to develop a resistance.

Non-toxic to people, pets, and pollinators.

Tips for Mixing and Spraying

Spider Mites on a Lemon plant

Protect your plants by applying foliar sprays of **Neem Pro 100%** every 2 to 6 weeks (depending on pest pressure). To combat an existing infestation, do follow-up sprays (5 to 7 days) if needed.

Try to spray in low wind, at dusk (when more bugs are active). Get more recipes and tips at www.neempro.com.

Foliar Spray Recipe

- 1 ¼ oz **Neem Pro 100%** (or 2.5 Tbs)
- ¾ oz liquid soap
- 1 gallon water

Combine in pump-sprayer and lightly coat all plant surfaces. Bugs hide under leaves, so spray up from below!

Mix 1 part oil to 100 parts water

- Use a plant-safe soap ('Ivory' or an organic soap) to mix this organic insecticidal oil with water.
- Start with room-temp water, add **Neem Pro 100%**, and then add soap and mix until the oil dissolves.
- If well-mixed, you will see a few soap bubbles (no oil slicks) on top.

Store in a cool, dark place. Neem oil turns solid below room temperature, so if it is thick when ready to mix, put the bottle in a plastic bag into a bowl of warm water until the oil is runny. Shake well before using.
