

# Neem Pro EC

## Easier than ever

**Neem Pro EC** is a new form of Neem Oil: an "Emulsified Concentrate" which dissolves smoothly in water. Packed with natural insecticidal compounds, it protects your crop from a wide variety of pests.

## Just Add Water

A foliar spray of **Neem Pro EC** is powerful enough to kill an infestation, and continues killing and repelling for two weeks.

## The Perfect Pesticide

**Neem Pro EC** disrupts bugs at every stage of their life cycles: it is an *anti-feedant*, a *growth-regulator*, and a *repellant*. It truly combines the broad-spectrum results of an organic insecticide with the ease of a one-step mix!

The main active ingredient is the natural insecticide Azadirachtin at 4025ppm. In addition, the many other natural compounds in neem oil improve its effectiveness and make it harder for bugs to develop a resistance.

## The 'Just Add Water' Organic Solution!

Used in small and BIG gardens.

A foliar spray of **Neem Pro EC** defends your harvest against hundreds of pest insects. Use the mixture shown below to fix an infestation; mix at half-strength for preventative spray.

### The "Just Add Water" Organic Bug Spray

- 1 ½ oz **Neem Pro EC** (get a 'shot-glass' sized measurer!)
- 1 gallon water, room temp.

Combine in pump-sprayer, stir/shake vigorously

-If possible, spray in low wind.

-Spray just after dusk when the bugs are active.

-Apply to all plant surfaces, especially undersides of leaves.

### Easy, Safe, Effective.

**Neem Pro EC** is strong enough for commercial agriculture, yet safe enough to spray in a greenhouse. It is great at protecting your plants because it's so toxic to bugs which ingest it. But, when applied as directed it is safe for pollinators (bees leave the area, then return), and it is always completely non-toxic to people and pets.
